Your Tractor's Best Friend

SIROMER VERGE MOWER

Siromer's verge mower is ideal for cutting verges, orchards and grass. It can also be used for light hedge maintenance. With hydraulic offsetting, this robust flail mower can be extended or retracted effortlessly from the tractor seat. Dual double acting spools are required on the tractor to operate the hydraulics of the verge mower. Hydraulic articulation allows the cutter to be angled from vertical to 60 degrees downwards, meaning it can be used for cutting along ditches, verges, between trees and under hedgerows. The arrangement of hammer flails with a rear roller to maintain height above the ground, allows the flail mower to be used on both a smooth lawn and uneven verges. The opening back is fitted to all Siromer verge mowers with 4 settings allowing the fineness of the cut to be changed whilst preventing grass clogging.

FEATURES:

- Opening back to prevent grass clogging.
- Hydraulic offsetting to cut outside tractor wheelbase.
- Can be angled from 90 degrees vertical to 60 degrees downwards.
- Requires dual double acting spool valves.
- Heavy duty Hammer flails and rear roller.
- PTO shaft included.

Model	Working Width (mm)	Weight	HP Required	Hammers
M52	1050	310kg	18-35	16
M54	1250	324kg	20-45	20
M55	1450	336kg	40-50	24
M56	1650	350kg	40-75	24
