

# SIROMER Equipment

**Your Tractor's Best Friend**

## **ROTARY TEDDER**

Tedders are designed to support crop drying and provide even distribution of the swath in order to speed up drying. Frequent use allows you to achieve the required dryness of the material. By tedding your cut grass you can reduce the loss in yield of up to 30%.

The construction consists of two rotors that are lightweight and very strong. The tedder is easy to maintain, manoeuvrable, and especially suitable for small and medium-sized farms.

The machine has universal tines and high-quality springs.

MODEL	Working Width	HP Rqd	Weight	No. Tines	No. Rotors
P34	2.7m	16 - 40	150kg	10 per rotor	2
