Your Tractor's Best Friend

SIROMER BALER

the Siromer round baler is a very high quality, tough yet affordable design. Ideal for the baling of all kinds of material bales, from hay and straw, haylage and silage, right through to vine cuttings. Requiring 24-40hp they are easy to use with full instructions and labeling, especially to assist first time users. The balers have their own hydraulic pump for superior bale handling and ejection, this also means the tractor is not required to have a spool valve. An audible signal indicates bale ready. Bale weights can easily be set to the weight preferred by the user. Even fairly wet bales can be baled with a moisture content of beyond 60%. The Siromer baler makes a 70cm bale, 80cm wide, featuring automatic string tying and fully contained hydraulics so no need for spool valves.
