SIROMER POWER HARROW

A power harrow is a great choice for less rocky areas with no grass and is essential for aerating the area, which enables the soil to gain warmth quicker so that plants can grow healthier. The Siromer power harrow is the perfect solution for seedbed preparation as spring steel blades aggressively churn soil to a depth of 6". The roller gently levels off the aerated soil, leaving a bed perfect for seeding. Power Harrows enable an extremely high crop yield since they do not invert soil layers, but rather help to maintain the soil's natural composition, structure and biodiversity. Ideal for use by local authorities, landscapers and nurserymen for the preparation of ground to be re-seeded or turfed, on building sites and football pitches etc.

MODEL	Structure Weight	HP	Number of Blade	Tilling Width	Tilling Depth	PTO Turning Speed
S53	280kg	24-50	12	1300mm	200mm	540r/min
S54	330kg	40-75	16	1700mm	200mm	540r/min
