**Your Tractor's Best Friend**

## SIROMER LAND RAKE

The Siromer landscape rake features curved tines on the bottom part designed to dig through the dirt and pull any underlying debris to the top of the soil. The main purpose of the landscape rake is clearing up land, but the way it does it is something very unique. The tines of a landscape rake will dig below the surface of the soil approximately 2 inches, pulling up roots, thatch, rocks and other debris to the top while allowing soil to stay in place due to the spacing in between the tines. The curved design of the landscape rake tines makes a perfect holder for all of this debris, using the tractor to transport it to a central location and dispose of it as needed.

The landscape rake is also a very useful tool for aerating and weeding, the tines can be angled or reversed for the levelling and spreading of soil, compost, bark chippings, horse manures etc. A great tool for renovating and levelling gravel paths and removing cut grass from horse paddocks. Fully adjustable through 360 degrees.

Fitted with a standard CAT I 3-point linkage. Fitting and removing takes minutes and turns your tractor into a superb landscaping tool. 10mm heat treated spring tines set at 6 tines per 300mm.

Model	Working Width	Weight
S90	1.5 m	120 kg
S91	1.8 m	140 kg
